

## 2. Anchoring

### Kedge Anchor

Our Lewmar Kedge anchors are available in a variety of sizes and can be used in a number of ways. For larger yachts, the Kedge anchor is used on bow pocket installations primarily seen on superyachts. When bow anchoring the two anchors can be deployed in a Y pattern to form dual holding performance. They can also be stowed away in the bow anchor pocket, flush against the hull.

- Available in sizes 105kg – 280kg
- Proven performance
- Galvanised or stainless steel available
- Good Holding Power
- Can be used in a variety of sea beds
- Able to stow away in the bow neatly
